

LEONIDAS LIFTS

Physique Blueprint

From Your FFMI to Your Target Physique — 12-Week Roadmap

LEONIDAS // LEONIDASLIFTS.COM

THE LEONIDAS LIFTS PHYSIQUE BLUEPRINT

From Your FFMI to Your Target Physique — A 12-Week Roadmap

This is the execution document. The FFMI Playbook told you where you stand. This Blueprint tells you where you're going, how fast you can realistically get there, and what to do every week for the next 12 weeks to close the gap. It combines three threads into one product: your FFMI-to-target mapping, a Claude-assisted weekly check-in system, and a 12-week recomp roadmap that bridges the supplement stack, the training program, and the nutrition plan into a single actionable timeline.

START HERE — DO THIS FIRST (NOT OPTIONAL)

This Blueprint only works if you walk in with real numbers and real fundamentals. Do these four things first, in order. None of them are optional.

- 1. Get your body fat percentage checked.** Go to your local gym *before* you train — not after, when you're pumped, depleted, and dehydrated. Have them measure your body fat (calipers, InBody, or a DEXA scan if you can get one). This is the one input everything else depends on.
- 2. Run the FFMI calculator at leonidaslifts.com — this is not optional.** Plug in your weight, height, and the body fat percentage you just had checked. The calculator returns your FFMI, where you sit against the natural ceiling, and your starting calorie and macro targets. Without these numbers this document is theory. With them, it is a plan. **Screenshot your results** — you'll feed that screenshot into the AI prompts later.
- 3. Read the free Leonidas Lifts PDFs first.** Before you ask any AI anything, build your foundation from the source. The **FFMI Playbook** (free) explains what your number actually means. The **Starter Supplement Stack** (free) covers your baseline. Both are

free at leonidaslifts.com. Read them before you prompt an AI — AI is sharpest when you already understand the fundamentals you're asking about.

4. Then — and only then — use this Blueprint and the three AI prompts below.

Get the number. Read the free PDFs. Then build.

Backed by 1 peer-reviewed study — verified May 2026.

THREAD 1 — FFMI Target Mapping

Where You Are → Where You're Going

Your current FFMI determines your target FFMI, the realistic timeline to reach it, and the natural-lifter ceiling that defines your upper bound. The table below maps starting position to target for the 12-week window covered by this Blueprint.

Current FFMI	Body Fat	12-Week Target	Strategy	Expected FFMI Δ
18–19	20%+	Cut to 15–17% BF, maintain LBM	Recomp (deficit)	+0.3–0.5
18–19	12–18%	Lean bulk (+200 cal/day)	Build	+0.5–0.8
20–21	18%+	Cut to 13–15% BF, maintain LBM	Recomp (deficit)	+0.2–0.4
20–21	12–16%	Lean bulk (+200 cal/day)	Build	+0.3–0.5
22–23	15%+	Cut to 11–13% BF	Reveal	+0.1–0.3
22–23	10–14%	Maintain or micro-bulk (+100 cal)	Polish	+0.1–0.2
24+	Any	Maintain. You are at the ceiling.	Maintain	± 0.1

The Natural-Lifter Ceiling

Kouri et al. (1995) established FFMI ~25 as the statistical ceiling for natural athletes. What this means practically:

- **FFMI 20 → 25 takes 5–10 years (brand-experience estimate)** of consistent, progressive training with locked nutrition
- **FFMI 22 → 24 takes 2–4 years (brand-experience estimate)** — the diminishing-returns zone where each point costs more than the last
- **FFMI 24 → 25 may take 3–5 additional years (brand-experience estimate)** — or may be unreachable depending on genetics

The 12-week window in this Blueprint will not take you from 20 to 25. It will move you 0.2–0.8 FFMI points in the right direction while teaching you the systematic process that, repeated over years, gets you to your ceiling.

Setting Your Specific Target

1. Run the FFMI calculator at leonidaslifts.com
2. Find your row in the table above
3. Your 12-week target is the FFMI Δ column added to your current FFMI
4. Your body fat target determines whether you're in a deficit (cut/recomp) or surplus (build)
5. Your macro targets come from the calculator output — these feed directly into Nutrition Plan V3

THREAD 2 — Claude-Assisted Weekly Check-In

The System

Every week, you check in with a Claude project that holds your FFMI data, your training log, and your nutrition targets. The AI does not replace your judgment — it organizes the data so your judgment is informed.

Setup (One-Time, 15 Minutes)

1. Open Claude.ai → Projects → Create "Physique Blueprint"

2. Upload this document into the project

3. In the project instructions, paste:

```
You are a physique coaching assistant for the Leonidas Lifts Physique Blueprint.
The user is a natural lifter running a 12-week recomp/build roadmap. Their
starting stats are in the first message. Each week they'll give you: bodyweight,
waist measurement, top-set lifts (bench/squat/OHP), meals hit (out of 6/day),
sleep hours average, and subjective energy (1-10). Track the data, flag any
regressions, and recommend adjustments per the Blueprint framework. Never
recommend steroids, SARMS, or any performance-enhancing drug. Frame all
recommendations within the natural-lifter context.
```

4. Send your first message with your starting stats:

```
Starting stats for 12-week Physique Blueprint:
- FFMI: [your number]
- Body fat: [your %]
- Bodyweight: [lbs]
- Height: [inches]
- Waist: [inches]
- Target: [cut/build/recomp from the table above]
- Top sets: Bench [lbs], Squat [lbs], OHP [lbs]
- Daily protein: [grams]
- Daily calories: [from FFMI calculator]
```

Weekly Check-In (5 Minutes Every Sunday)

Each Sunday, send Claude this update:

```
Week [N] check-in:
- Weight: [lbs] (Δ from last week: [+/-])
- Waist: [inches] (Δ: [+/-])
- Top sets: Bench [lbs×reps], Squat [lbs×reps], OHP [lbs×reps]
- Meals hit: [X/42] (6/day × 7 days)
- Avg sleep: [hours]
- Energy: [1-10]
- Notes: [anything unusual – missed sessions, travel, illness, stress]
```

Claude will: - Track your week-over-week trends - Flag if weight is moving too fast (>1% BW/week loss = muscle risk) or too slow - Flag if lifts are regressing (potential overtrain or under-eat signal) - Recommend macro adjustments based on the Nutrition V3 phased

approach - Suggest deload timing based on the Training V3 deload cadence - Calculate your updated FFMI estimate (if body fat measurement is available)

What Claude Cannot Do

- It cannot see your body. Mirror progress and visual assessment are yours alone.
- It cannot replace a licensed physician, registered dietitian, or certified trainer.
- It cannot account for factors you don't report. Be honest in your check-ins — garbage data produces garbage recommendations.
- It does not have access to your bloodwork. If you are running the Longevity Peptide Stack, share relevant lab results separately.

THREAD 3 — 12-Week Recomp Roadmap

The Architecture

The 12-week roadmap bridges three Leonidas Lifts plans into one coordinated timeline:

Week	Training (V3)	Nutrition (V3)	Supplements
1–4	Full volume, establish baselines	Phase 1 deficit entry (or lean bulk)	Starter Stack baseline
5–8	Progressive overload focus, beat the logbook	Phase 1 continued, recalibrate at week 4 if >10 lbs lost	Starter Stack + consider collagen peptide
9–11	Maintain intensity, watch for deload signals	Phase 2 deep cut (if cutting) or continued surplus (if building)	Full Starter Stack, add collagen if not started
12	Deload week (mandatory)	Finishing strike (if cutting) or maintenance transition (if building)	Maintain stack through transition

Week-by-Week Execution

Weeks 1–2: Establish Baselines - Take starting photos (front, side, back — same lighting, same time of day) - Record all top-set weights for the 6-day split - Set up the Claude project with starting stats - Lock in meal prep (Nutrition V3 Meal Architecture) - Begin the Starter Supplement Stack if not already running - First weekly check-in: Sunday of Week 1

Weeks 3–4: First Adaptation Window - Progressive overload should be visible (even +1 rep or +5 lbs counts) - Waist measurement should begin decreasing if cutting - If weight loss is >2 lbs/week, increase calories by 100 — you are losing too fast and risking muscle - If weight is flat on a build, increase calories by 150 - First body fat re-check (calipers or InBody) at end of Week 4 if available

Weeks 5–8: The Growth Window - This is where visible changes begin (Nutrition V3 Week 5–8 milestones) - Top-set weights should be climbing on at least 2 of 3 primary lifts - If a lift has plateaued for 3+ weeks, rotate per Training V3 Rotation Philosophy - Add collagen peptide (10–20g + 500mg vitamin C, 60 min pre-training) if joint stress is accumulating - Take progress photos at end of Week 8 — compare to Week 1

Weeks 9–11: Reveal or Build Phase - Cutters: Phase 2 macros from Nutrition V3. Add bi-weekly carb refeeds. - Builders: Continue surplus. Watch waist — if expanding >0.5 inch/month, reduce surplus by 100 cal - Deload signals to watch for (Training V3): consecutive regression, joint pain, sleep disruption, motivation collapse - If deload signals present in Week 9–10, deload then (don't wait for Week 12)

Week 12: Mandatory Deload + Assessment - Deload per Training V3 protocol (50–60% volume, 60–70% intensity, same frequency) - Final body fat measurement (DEXA if possible — this is the one that counts) - Calculate final FFMI - Take final progress photos - Claude check-in with full 12-week summary - Decide: continue into next 12-week block, or transition to maintenance

USE AI TO BUILD YOUR PLAN — 3 PROMPTS

This is the part most people skip: actually using AI the right way. The trick is simple — feed it your real numbers, tell it to act as your personal trainer, and run the prompts in order. Copy each prompt into Claude (claude.ai), attach your FFMI calculator screenshot from leonidaslifts.com, and go.

Use them in order. Don't run Prompt 2 until you've worked through Prompt 1. **Prompt 3 is only for lifters at FFMI 22.5 or above** — below that, your job is to keep building with training and nutrition, not to add peptides.

Prompt 1 — Diagnose My FFMI

Paste into Claude and attach your FFMI calculator screenshot from leonidaslifts.com.

```
Act as my personal trainer. I've attached a screenshot of my results from the Fat  
  
Read the screenshot and give me an overall summary:  
1. Restate my FFMI, Normalized FFMI, body fat %, and my calorie/macro targets so  
2. Tell me where I stand on the natural scale (~25 FFMI is the natural ceiling, K  
3. One rule for later: if my FFMI is BELOW 22.5, peptides are not for me yet — I  
  
Then ask me what you need to coach me properly — at least my age, training histor
```

Prompt 2 — Best Foods For My Goals

Run this once Claude has your numbers and your answers from Prompt 1. Attach the same screenshot.

```
Act as my personal trainer. Here's my FFMI screenshot from leonidaslifts.com again  
  
[paste your age, training history, bodyweight, goal, and constraints]  
  
Using the calorie and macro targets from my screenshot, build me a food plan that  
1. The best whole foods to hit my protein, carb, and fat targets — give me a real  
2. A simple daily meal structure to hit my numbers, given as a range, not a rigid  
3. A few easy swaps for when I'm busy, traveling, or eating out.  
  
Keep it sustainable — no crash diets, no extreme restriction. Foods I'll actually
```

Prompt 3 — Peptides For My Goals (only if FFMI 22.5+)

Only use this if your FFMI is 22.5 or above. If it's below 22.5, skip it — keep building with training and nutrition first. Attach your FFMI screenshot.

Only use this if my FFMI is 22.5 or above. If it's below 22.5, skip this – keep b

Act as my personal trainer. Here's my FFMI screenshot and my goals again:

[paste your goal, training history, and what you're trying to improve – recovery,

Help me figure out which peptides actually fit my goals:

1. Match my goals to the peptide categories that are relevant (e.g. tissue repair
2. Tell me honestly where a peptide would – and wouldn't – move the needle versus
3. Give me a list of questions to bring to a licensed provider before I start any

This isn't medical advice and I'm not buying anything from a chatbot – confirm ev

The Full Leonidas Lifts System & Key Takeaways

This Blueprint works best as part of the complete system. Everything is at leonidaslifts.com:

- **Training Program V3** — the 6-day split, progressive overload, rotation philosophy
- **Nutrition Plan V3** — the macro architecture, meal prep, supplement stack timing
- **Peptide Protocol V3** — the 24-week recovery optimization (after 2+ years foundation)
- **Starter Supplement Stack (FREE)** — the 5 baseline compounds for natural lifters
- **FFMI Playbook (FREE)** — what FFMI is, why BMI fails, how to calculate and use it
- **Annual Longevity Peptide Stack** — the 4-compound connective tissue recovery layer
- **Spartan Bundle** — Training + Nutrition + Peptide — all three scrolls at a discount

What to remember from this Blueprint:

1. **Start with your FFMI** from the calculator at leonidaslifts.com. Everything else flows from that number.
2. **The natural ceiling is ~25 FFMI** (Kouri et al., 1995). Set goals within that boundary. Expect 0.2–0.8 FFMI gain in 12 weeks depending on training age.
3. **Weekly Claude check-ins take 5 minutes** and turn subjective progress into tracked, data-driven decisions.
4. **The 12-week roadmap bridges Training V3 + Nutrition V3 + the Supplement Stack** into one coordinated timeline.

5. **Take progress photos at Weeks 1, 8, and 12.** Same lighting, same time, same angles. Your eyes adapt; photos don't.
6. **Deload at Week 12 is mandatory**, not optional. It sets the ceiling for the next 12-week block.
7. **If you haven't read the Training Program, Nutrition Plan, and FFMI Playbook** — start there. This Blueprint assumes you have. The **Spartan Bundle** at leonidaslifts.com gives you all three scrolls in one purchase.

A Final Word

Nothing in this Blueprint is medical advice. It is an educational framework for using AI and the Leonidas Lifts system to build your own plan. We are not your doctor, dietitian, or healthcare provider — for anything involving your health, talk to a licensed professional.

If you want peer-reviewed, studied information with full sources behind every recommendation, that lives in the **Leonidas Lifts product catalog at leonidaslifts.com** — the **FFMI Playbook** and the **Spartan Bundle** (Training Program V3 + Nutrition Plan V3 + Peptide Protocol V3). The prompts above are the on-ramp. The catalog is the full, sourced system.
